SCHED

Last release (6.02) in July 2005 – new release shortly

- Several bug fixes...

- More rigorous testing for frequency of T_{sys} with a check for slewing and much clearer warnings

- Warn about continuous motion > 90 minutes (gaps needed for bank switches)

- Disk recording is default for EVN stations

- Allow use of 'FORMAT=NONE' scans with Vex – these appear as comments

- New warnings about time lost to correlator resyncs and formatter reconfigures (mostly VLBA)

- **Please check that catalogues are up to date**
